

SORRY, GOTTA GO

existentialism is a humanism. — jean-paul sartre
yes, but in what sense? — pierre desproges

unit (u): the distance between two adjacent points of the grid of a world*. cells* cannot lie between two adjacent points.

so you want to know how to fight, how to have the best of your neighbour? better learn how to flea first!

ene hasiberria, your cells will walk toward their neighbours and, when they get close enough, they will turn around smugly, like a tease hearing a four-letter word.

instruction *proximity* pushes the distance to the nearest neighbouring cell.

code *approach* step, followed by a conditional block that decides whether the cell is closer than 20 distance units from its neighbour. within this conditional, *turn* turn to turn around, then *step* 300 times.

if you thinks this is hard to follow, go take a look at brainfuck.
